The extreme climate change nowadays has created a sense of urgencies for nations worldwide to address and mitigate the problems that arises with it. Human activities that resulted in the brisk shift of global climate could pervade the quality of life and human security. In this forthcoming chapters the author aims to address Government of Indonesia's Securitisation attempts in response to the global security issues and its securitisation process in ratification of Paris Agreement, 2015. This paper is divided into five chapters associating global climate change to national impacts using Indonesia as a case study. The core theories that will be used are the Copenhagen School and Human Security to evaluate the attempts of securitisation process by Indonesian Government. This research adopts qualitative descriptive and in depths literature study on Indonesia's securitisation. Ultimately, the author finds that Indonesia has successfully securitise Climate change however, found the preceding actions to be insufficient to align with Paris Agreement.
